11 . ReadingThe Diagram

- Solid arrows show normal user or data movement.
- Dotted arrows show optional or reference-only connections .
- Billing , stock , enquiries , reports , settings , backup , and cloud sync are connected through shared business records .
- Purchase Records are document references only ; they do not increase stock and do not become expenses .
- Quick stock sales are stock movements and reporting entries ; they are separate from GSTinvoice billing .
- Cloud sync helps multi -PC operation and official invoice numbering , but backup is still required .
